Subject United Zinc draft PA Report - 2/20/07

Kumud,

Please address the following comments and resubmit the PA Report

- 1 Provide a discussion of residences with lead contamination between 400 mg/kg and 800 mg/kg. Since the removal should address all areas contaminated above 800 mg/kg, these residences will be critical to listing the site on the NPL. Also, include in the appendices a listing of these detections similar to Table 1.
- 2 Discuss other needed sampling, particularly ground water and air sampling, sampling that should be conducted during the SI to reinforce the HRS score, again critical to listing the site on the NPL.
- 3 There should also be a discussion of the removal and how it will contribute to the ultimate cleanup of the site.

Additionally, you should prepare the QAPP and SAP for the SI as this will need to be finished and finalized in time to propose the site in September of 2007.

Thanks, Paul
